What changed in v3.1 (October 11, 2026)

- ProsperaCraft is archived for now: paused and no longer presented as live.
- HuskyWorld is now in development (alpha phase), with an early playable alpha.
- DAO Governance is live: holders vote on proposals at lexthehusky.com/dao.
- The staking reward period is updated (current period ends October 31, 2026).
- The roadmap lists were brought in line with lexthehusky.com.
- Tokenomics and key-metric figures are still the September 11, 2026 snapshot; live figures are on the Burn Center page of lexthehusky.com.

1. Executive Summary

Lex The Husky (\$LEX) is a community-driven, deflationary meme token on the Cronos blockchain, inspired by the real-life Siberian Husky, Lex — a symbol of loyalty, adventure, and unyielding energy. Launched on October 29, 2024, \$LEX tackles the trust and sustainability issues common in the meme coin space through radical transparency, a 0% buy/sell tax on the token itself, and an ongoing deflationary burn program.

With a total supply of 6,000,000,000 \$LEX, \$LEX holders can stake tokens and OG Passes for rewards. The official website — rebuilt from the ground up and now actively maintained by the founder himself — offers live on-chain staking, swapping, and burn tracking, with no information hidden behind a wallet connection.

Key Metrics (as of September 11, 2026):

- Total Supply: 6,000,000,000 \$LEX
- Burned Supply: 782,000,000.10 \$LEX (13.03%)
- Contract Address: 0x25B7449E2416e0Ef0f244f6cC34eb31C4902d9Cb
- Blockchain: Cronos

\$LEX is not a pump-and-dump; it's a pack built for the long haul.

2. Vision and Message from the Founder

As the Founder of \$LEX, Bjorn Daems (aka B54), I see this project as my child — a creation born from passion, frustration with the crypto space, and an unbreakable bond with my Siberian Husky, Lex. In a world where meme coins promise the moon but deliver rugs, \$LEX stands for something deeper: loyalty to the community, transparency in every transaction, and a relentless drive toward deflationary excellence.

I now build and maintain the website myself, which means the site keeps evolving and updates don't wait on a third party anymore. \$LEX isn't just a meme; it's the howl of a pack that's here to stay. Join us — let's conquer the tundra together.

— **Bjorn Daems (B54), Founder & Developer**

Lex — the real Siberian Husky behind \$LEX

3. The Problem in Meme Token Ecosystems

The meme coin sector, while innovative and community-focused, is plagued by systemic issues:

- **Lack of Transparency:** Anonymous teams, hidden wallets, and rug pulls erode trust, with over 80% of launches failing within months.
- **Inflationary Pressure:** Unlimited minting or hidden taxes lead to dilution, punishing loyal holders.
- **No Real Utility:** Hype fades without sustainable mechanics, leaving tokens worthless post-pump.
- **Short-Termism:** Focus on viral marketing over long-term value creation results in volatile, unsustainable projects.

On Cronos, a high-speed EVM-compatible chain, these problems are amplified by low barriers to entry, leading to a saturated market of forgettable tokens.

4. The \$LEX Solution

\$LEX flips the script with:

- **Full Transparency:** Founder fully identified, all wallets and mechanisms verifiable on-chain.
- **Zero Token Tax:** No buy/sell fees on \$LEX itself — pure, frictionless trading on any exchange or DEX.
- **Consistent Deflation:** Founder-executed monthly burns reduce supply predictably (see Section 6).
- **Community-First Growth:** Organic community via #Crofam, staking rewards, and an honest, always-updated website.
- **Real-World Tie-Ins:** From gaming (HuskyWorld) to community governance (the DAO), \$LEX's ecosystem bridges memes with tangible activity.

By prioritizing deflation and utility, \$LEX builds a self-sustaining ecosystem where holders benefit from every milestone.

5. Tokenomics

\$LEX follows a simple, fair-launch model with no presales or VCs.

Supply Breakdown (as of September 11, 2026):

Category	Amount (\$LEX)	%	Notes
Total Supply	6,000,000,000	100%	Fixed, no minting
Dead Wallet (Burned)	782,000,000.10	13.03%	Permanent, live-verified
Burn Wallet	510,000,000	8.50%	10M sent manually each month
Founder Wallet	257,544,314.34	4.29%	200M staked + 57.5M held directly
Staking Rewards Wallet	525,009,907.95	8.75%	Funds the staking pool over time
Giveaway Wallet	37,000,000	0.62%	
Funding Wallet	2,596,628.56	0.04%	

Liquidity:

- Primary LP on VVS Finance (\$LEX/CRO): >90% burned (near-permanent lock).
- Secondary LP on Obsidian Finance (\$LEX/CRO, \$LEX/WBTC): partially burned for migration flexibility.

6. The Lex Deflationary Engine

\$LEX's deflationary mechanism has four independent parts:

1. Monthly Burn Wallet

At the start of each month, the founder manually sends 10,000,000 \$LEX from the Burn Wallet to the dead wallet. This is a manual, founder-executed process — not smart-contract automated — done consistently since launch.

2. Lex Reserve (\$LION Staking)

Separately, the project holds 20,000 \$LION staked for a 5-year term. From the yield this generates, 66% is swapped to \$LEX and burned, and 33% is reinvested into \$WCRO to grow the reserve. Because the yield amounts are currently small, this isn't executed monthly like the Burn Wallet — it's done once the accumulated amount is meaningful enough to be worth the transaction.

3. Lex The Husky Trading & Burn Bot (in development)

A separate, not-yet-live initiative: a dedicated trading bot for \$LEX whose profit will be split 25% back to trading capital, 25% to the funding wallet, and 50% used to buy and burn \$LEX. Currently in development — 0 \$LEX burned so far, tracked live on the Burn Center.

4. Website Swap Tax (live, new since v2.0)

\$LEX's own swap page on lexthehusky.com offers an optional 5% ecosystem-support fee — separate from the 0% token-level tax, and only on this one page. Collected fees are periodically bought-and-burned or burned directly, with a fully public on-chain history.

7. Staking and Rewards

Stake \$LEX and Lex OG Passes directly on lexthehusky.com.

\$LEX Staking (live):

As of October 11, 2026 — total staked ~1.13 billion \$LEX, no lock-up period; the APR fluctuates with pool activity. Rewards come from a periodically-funded reward pool (10,000,000 \$LEX for the current period, ending October 31, 2026).

OG Pass Staking (live):

Stake your OG Pass NFTs for \$LEX rewards, same no-lock-up model.

Both pools, plus your personal stake and pending rewards, are visible on the site without needing to connect a wallet first.

8. Website Swap & Ecosystem Support Fee

lexthehusky.com includes a built-in swap for \$LEX with live pricing. Swapping through the official website specifically (not on VVS, EmberCRO, or any other exchange) includes an optional 5% ecosystem-support fee, split between a buy-side and sell-side collection wallet. This fee:

- Does **not** apply anywhere else \$LEX trades — the token itself remains 0% tax everywhere.
- Is collected transparently, with a public on-chain history of every \$LEX-side transfer and burn.
- Funds periodic buy-and-burn activity, on top of the monthly Burn Wallet process.

9. Utilities and Real-World Integration

1. HuskyWorld Gaming Platform — In Development (Alpha)

A base-building strategy game (Clash of Clans-style) with a husky/arctic theme, mobile-first. Currently in development (alpha phase), with an early playable alpha at huskyworld-village.netlify.app (expect bugs and resets). \$LEX and the future \$SLG utility token are planned to tie into in-game purchases and burns as development continues.

2. NFT Collections

- Lex OG Pass: a 60-unit planned collection — 14 minted so far, remainder to be minted via Ebusus Bay.
- Male & Female Lex NFT collections: planned, not yet minted, name TBD.

3. ProsperaCraft — Archived

A Minecraft server with a player-driven economy, cities, and wilderness — founded and personally funded by B54. It is archived for now and no longer presented as live; the server details have been removed. Plans to tie it to \$LEX buyback-and-burn activity are on hold while it is archived.

4. Retail & Real-World Expansion — Planned

Merchandise store, and further down the line, potential physical retail tied to buyback-and-burn programs.

5. Decentralized Governance (DAO) — Live

Token holders vote on proposals about burns, features, and ecosystem direction at lexthehusky.com/dao. Votes are free signed messages (no gas, no tokens move). Voting power is the \$LEX in a wallet plus staked \$LEX at a snapshot block; voting requires at least 1,000,000 \$LEX, and a vote needs a quorum of 60,000,000 \$LEX from at least 10 wallets. Each proposal states in advance how its result is applied.

10. Roadmap

In place of fixed dates, this roadmap is honest about stage — matching the same Live / In Development / Planned / Archived framing used across lexthehusky.com.

Live today:

\$LEX Token · Swap (incl. website ecosystem-support fee) · Token Staking · OG Pass Collection & Staking · Community page · Whitepaper · Burn System · Cronos Radar · DAO Governance

In development:

Lex The Husky Trading & Burn Bot · HuskyWorld (alpha phase, playable alpha available)

Planned:

\$SLG Token · Automated Deflation Engine · Male & Female Husky Collections · Merch Store

Archived:

ProsperaCraft (paused for now)

11. Team and Partnerships

- **Founder & Developer:** Bjorn Daems (B54) — builds and maintains lexthehusky.com directly, handles community.
- **Artist:** ILZ — NFT collection art.
- **Partners:** Silex, EmberCRO.

Open to more contributors — join the pack.

12. Technical Overview

- **Blockchain:** Cronos (EVM-compatible, low fees).
- **Standard:** ERC-20.
- **Token Tax:** 0% buy/sell, everywhere except the website's own optional 5% support fee (Section 8).
- **LP Locks:** VVS >90% burned; Obsidian partial, for migration agility.
- **Website:** lexthehusky.com — swap, staking, OG Pass staking, live burn tracker and history, community, whitepaper.
- **Contract Address:** 0x25B7449E2416e0Ef0f244f6cC34eb31C4902d9Cb

13. Risks and Disclaimer

Cryptocurrency investments are high-risk. \$LEX is volatile; past performance is not indicative of future results. This is not financial advice — do your own research. Risks include market volatility, regulatory changes, and smart contract vulnerabilities. The team commits to transparency but offers no guarantees.
